

clara-backend

Prepared for Clara GmbH • Jun 18 → Jul 17, 2026 • 30 days • halton-meter v0.6.2

TOTAL

\$412.80

USD • computed locally, per request

REQUESTS

6,720

100% captured, 100% attributed

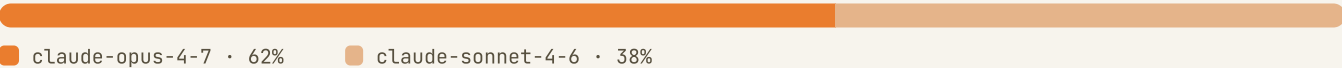

TOKENS

4.6M

≈1.32M in • ≈3.29M out

SPEND BY MODEL

MODEL	SHARE OF SPEND	RATE (IN / OUT, PER MTOK)	COST
claude-opus-4-7	62%	\$5.00 / \$25.00	\$255.94
claude-sonnet-4-6	38%	\$3.00 / \$15.00	\$156.86
Total			\$412.80

METHODOLOGY

Every figure was computed locally by the halton-meter daemon on the developer's machine. Token counts are read from the wire, per request; costs are exact against the provider's published rates — rate source [bundled-2026-07-13](#) on every row. Requests are attributed to the project before they leave the machine. Unknown rates are stored as `NULL`, never \$0. Reproducible from the underlying ledger at any time.
